ABSTRACTED-PUB-NO: DE 19613698A

BASIC-ABSTRACT:

Transdermal agent contains one to three ester derivs. (E) of 13-ethyl-17 beta -hydroxy-11-methylene-18,19-di:nor-17 alpha -pregn-4-en- 20-yn-3one (I), with 1-20C in the ester part. The agent opt. also contains (non-esterified) (I) and/or 1-3 oestrogen cpds. (II).

Also claimed is the use of (E), and opt. 1 or more (II) for producing an agent for the transdermal application of the active agent or its mixt. .

(E) are new, provided that there are 2-8C in the alkanoyl residue.

USE - (E) are admin. from a transdermal therapeutic system (TTS); oestrogen-free (E) are used for transdermal contraception, and for the treatment of endometriosis, gestagen-dependent tumours and premenstrual syndrome; and (E), opt. with oestrogen, are used to treat climacteric (menopausal) symptoms, to prevent osteoporosis, for regulation or stabilisation of the menstrual cycle and for transdermal contraception. (all claimed). (I) is a known gestagen that can be used for oral contraception. (E) may be applied as a TTS, an emulsion gel, a single phase gel or a spray.

ADVANTAGE - (E) have higher transdermal flow than (I). A transdermal system of application avoids gastrointestinal effects and the first liver passage of any oestrogen component.

AB The invention relates to a therapeutic composition for topical application containing at least one product with an irritant side effect

and a substance P antagonist for reducing or even eliminating the irritant effect of this product.

It also relates to the use of a substance P antagonist for the preparation of a pharmaceutical composition for topical application containing at least one product with an irritant side effect for reducing or even eliminating the irritant effect of this product.

The substance P antagonist may be a peptide compound or a nitrogen-containing compound or a nitrogen-, sulphur- or oxygen-containing heterocyclic compound.

AB The present invention relates to the use of at least one extract from at

least one non-photosynthetic filamentous bacterium as substance P antagonist in a cosmetic composition or for the preparation of a pharmaceutical composition. The invention also relates to the use of at least one extract from at least one non-photosynthetic filamentous bacterium in a cosmetic composition or for the preparation of a pharmaceutical composition intended for the treatment of disorders associated with an excess in the synthesis and/or in the release of substance P. The invention additionally relates to various compositions containing an extract from at least one non-photosynthetic filamentous bacterium and to a cosmetic treatment process.

AB A composition suitable for topical application to mammalian skin or
hair

for inducing, maintaining or increasing hair growth comprises:

(i) a first chemical inhibitor chosen from proteoglycanase inhibitors,
glycosaminoglycanase inhibitors, glycosaminoglycan chain cellular
uptake inhibitors or mixtures thereof; and

(ii) a cosmetically acceptable vehicle for the chemical inhibitor;

provided that when the first chemical inhibitor is a weak inhibitor,
such that a 1 mM aqueous solution of the inhibitor reduces
proteoglycanase activity, glycosaminoglycanase activity or cellular
uptake of glycosaminoglycan chains, by from 5 to 50%, in accordance
with

at least one of the assay tests as herein described, then there is also
present in the composition a second chemical inhibitor and/or an
activity enhancer. When minoxidil is the sole chemical inhibitor, then
the activity enhancer is a penetration enhancer chosen from a limited

number of materials, including certain esters and cationic polymers.

The total amount of chemical inhibitor present in the composition is sufficient to increase hair growth in the rat, when said composition is applied topically thereto, by at least 10% more than that obtainable using a control composition from which the said inhibitors have been omitted.
